

# REVES SONORES, SPECTRA SERIES

Steven Feld

REVES SONORES, Spectra series, is a set of dream sonographs realized in February and March 1985. Some are visualizations of sounds I've heard or dreamed I've heard. Others are visualizations of sounds I'd like to hear, or sounds I imagine myself making or dreaming someday. Some are fermata images; sustained sound objects. Others are scores of about 2.4 seconds duration of motion sound objects. These spectra were realized on an Apple Macintosh computer and Imagewriter printer, then xeroxed from first generation prints. This tends to produce images with higher resolution and contrast than I usually see in my dreams.
